

TRS DUAL-CABLE BICYCLE BRAKE LEVER

TRS is pleased to offer a Dual-Cable Bicycle Brake Lever. We believe this product is an excellent alternative brake system for persons with upper limb absence or dysfunction. This brake lever provides the performance and safety of using both brakes on the bicycle, using single hand lever activation.

The Dual-Cable Lever operates two standard brake cable lines simultaneously. For safety, the rear brake cable must be adjusted so that the rear brake engages slightly before the front brake. Standard brake cables and cable housings may be obtained from your local bicycle pro shop.

TRS recommends you have a certified bicycle technician install and test your brake system prior to use.

We sincerely hope you will enjoy using the Dual-Cable Bike Brake lever for fun and safe bicycling.

Always wear and approved bicycle helmet.

Contact TRS for any questions or information.
